

A Key Priority of the National Hypertension Taskforce: Integrating Data and Systems to Facilitate Team-Based Care¹⁻²

Use Best Practice to Improve BP Management:

01 IDENTIFY PATIENTS

Visit:

servier.com.au/best-practice to access the code to **copy** and **paste** into **SQL Query**.

Click **Utilities** > Search

Paste > **SQL Query** in SQL Query box

Click > **Run Query**

2 different SQL queries are available to identify:

- Patients with hypertension & not at target BP seen in this calendar year (2025) with one or more blood pressure reading >140 SBP or >90 DBP
- Patients seen in this calendar year (2025) with one or more blood pressure reading >140 SBP and not taking an antihypertensive medication

02 ADD A NEW REMINDER TYPE

Click **Setup** > Configuration > Reminders

Click **Add** > Reminder Reason

Type > Check BP and Review Management

Select **Default Interval** of **1 month**

Click **Save**

03 FLAG PATIENTS ON LISTS

Run the list again from Step 1

Click **File** > Add to Reminders

Choose **Reminder Reason** > Check BP and Review Management

Click **Save**

Each relevant patient should now be flagged with the reminder in the middle of their personal medical record.

Avoid unintentional communication with patients via 3rd party messaging services

• AutoMed Systems Users:

Avoid Steps 2 and 3 as it may trigger text message reminders to patients.

• HotDoc, Bp Comms, Healthengine, GoShare Healthcare Users:

Do not attach template to newly created Reminder. Check system settings and disable reminders/recalls prior to Step 3.

*e.g. for Hot Doc – Go to Recalls > Template Group > Z – ignore (Not Sent via HotDoc) > edit Reasons > select “Check BP and Review Management” > **Save***
